

New Opportunity to Fly!

"Whitewater Aviation recognizes that the traditional dream of being able to reach for the skies and fly your own airplane has become too expensive: hangar rents, insurance, maintenance and fuel (again going to \$5.00 per gallon for 100LL). With our program the dream of flying is now a reality because acquiring an airplane is reduced by 90%.

How would you like to be part owner of the pictured airplane for one tenth of the cost? Then be able to fly the airplane for only \$32.00 per hour (dry), which includes the hangar rent, maintenance inspections and insurance. Compared to other similar sized aircraft, it uses only half the fuel...you can now fly 120 nautical miles just sipping only 5 gallons of fuel with about an 800 nautical mile range! Turn the autopilot on and go...

Whitewater Aviation is inviting 10 pilots (and future pilots) to join this flying club and purchase the aircraft. Limited shares are being offered in this new light sport aircraft that will be based at the Martin Campbell airport in Copperhill, TN. We will get you checked out in this new aircraft (or teach you how to fly!).

It will have the latest avionics, TCAS, autopilot and weather radar. The hangar will have a classroom for those learning to fly, complete with a flight instructor, (his charges are not included in the package). No FAA medical exam is necessary for a light sport pilot license; all you need is a current driver's license. The new Sports Pilot exam has been simplified and can be accomplished in 15 hours flight training and 5 hours solo flight as listed in FAR 61.311.

Not interested in owning a plane? Why not just learn to fly in one of the most economical and safe aircraft available?
